Status of claims

Claims 10, 13-16 and 37-40 are canceled. Claims 1-9, 11-12, 17-36 and 41-47 are presented for examination

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, 11-12, 29-36 and 47, drawn to a method and an apparatus to determine if there is a defect in the effective display area of the substrate, classified in class 324, subclass 770.
- II. Claims 17-28 and 41-46, drawn to an inspecting apparatus to determine if there is a defect in the effective display area of the liquid crystal display device, classified in class 324, subclass 770.

The inventions are distinct, each from the other because:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a method and an apparatus for comparing the charged voltage of the corresponding one of the capacitors with a predetermined reference voltage and for determining if there is a defect in at least one of the signal wirings, the driving switch devices and the capacitors which the Group II does not require. Whereas the method and apparatus of Group II comprise a first inspection line to which a gate-off voltage lower than a threshold voltage of the first transistor is supplied and a second inspection line to which

Art Unit: 2829

a gate-on voltage higher than a threshold voltage of the second transistor is supplied which the Group I does not require. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
